

CONIFERCORE®
POPULATION HEALTH
INTELLIGENCE

Helping You:

- Quickly understand your population's financial and clinical performance
- Track and understand population conditions
- Understand your population to improve outcomes and engage individuals
- Identify risk, potential care opportunities, and potential high-risk/high-dollar conditions
- Manage cohorts and create disease registries for more than 25 conditions
- Aggregate and analyze disparate healthcare data

Gain Complete Visibility into the Health of Your Population

Providing a comprehensive view of your population's needs and risks through technology-enabled tools and dashboards

YOUR BUSINESS CHALLENGE

Improving the health of a population is a data-driven undertaking—from identifying health risks and modeling the costs of intervention, to measuring outcomes and financial results. Without accurate, integrated data that's available on demand, measurable improvement is impossible. For providers, you must be able to use the wealth of data at your disposal to deliver evidence-based care in real time. For employers, you need to help individuals understand and take responsibility for their personal health and wellness.

WHAT WE OFFER

ConiferCore® Population Health Intelligence provides secure, web-based access to comprehensive clinical and financial information needed to provide cost-effective, high-quality care, as well as support wellness engagement programs that improve the health of a population. The platform also provides comprehensive monthly and ad hoc reports that enable multidimensional analysis of financial and clinical data to evaluate provider and plan performance. These reports are generated from our powerful data analytics engine which aggregates, stores and organizes vast amounts of information from multiple sources into a highly efficient, well-organized resource—allowing care teams and administrators to:

- Aggregate data for a holistic view of the individual
- Stratify the levels of risk for your population(s)
- Review your plan's operational performance and medical spend
- View hospital utilization trends

Conifer Health helps organizations transition from volume to value-based care, enhance the patient experience and improve quality, cost and access to healthcare.

HOW WE'RE DIFFERENT

Longitudinal patient record

Our Population Health Intelligence platform provides a comprehensive, integrated record of every patient across providers—including the patient synopsis report and clinical claims chart—to document clinical interventions, address risks, improve outcomes, and provide a holistic view of the patient.

Web-based provider portal

Our Population Health Intelligence platform integrates with our provider portal for access to information about patient risk levels, factors contributing to risk, and potential care opportunities. Graphical dashboards include real-time displays of quality metrics at the hospital, practice, specialty and individual physician level.

Powerful analytics engine

From the comprehensive data in the analytics engine—including enrollment, eligibility, paid claims, utilization history, lab results, pharmacy claims, electronic medical records, health histories, health risk assessments, and physician records—our system creates meaningful information that can be utilized for successful population health management.

Outcomes tracking dashboard

Our dashboards make data actionable by monitoring populations based on disease state, risk stratification, lab results, health risk assessment results, providers, and other variables.

Reporting engine

Multiple reporting options fall into three main categories: plan performance, provider performance measures, and clinical performance. Medical management reports track cost savings and return on investment, engagement rate, adherence with program requirements, and progress toward outcomes. Our financial reports bring together medical, pharmacy and claims data to help analyze performance.
