

CONIFERCORE®
PARTICIPANT PORTAL

Helping You:

- Empower individuals to improve their own health and wellness
- Encourage participants to stick with health goals through goal tracking
- Communicate with the care team for a coordinated level of care
- Assign specific educational materials to participants
- Provide a medical summary that can be used to deliver a holistic view of an individual's health history—a useful tool when consulting with healthcare providers

Empower and Encourage Active Participation in Individual Health

Engaging with the population to help individuals become partners in their care plans and collaborators in their health

YOUR BUSINESS CHALLENGE

Getting individuals to adhere to care plans and collaborate in their own wellness is critical to improving health outcomes. Providers are tasked with transforming patients into engaged decision-makers so they make lifestyle changes that lead to better health and reduced costs. In turn, this creates healthier populations with better outcomes, while extending the reach of treatment and diagnostic programs in the community. The challenge lies with engaging patients outside of office visits, and fortunately, information technologies can help with this.

WHAT WE OFFER

ConiferCore® Participant Portal is our customizable, secure, interactive web-based portal that provides individuals with links to thousands of health articles, interactive tools, health decision points, and a symptom checker where they can understand and manage health conditions or work toward wellness plan incentives.

Conifer Health helps organizations transition from volume to value-based care, enhance the patient experience and improve quality, cost and access to healthcare.

ConiferCore® Participant Portal includes:

- Comprehensive health information including paid and pending claims, health articles and a personal health record where individuals can input information
- Incentive programs tracking against goals set by the care team or through benefits design
- The ability for secure communication between care managers and individuals
- Health risk assessments that engage individuals to better understand their health risk level, enhancing data analytics in ConiferCore® Population Health Intelligence
- Customizable participant surveys

HOW WE'RE DIFFERENT

Population risk stratification

Our data and tools within the portal assist in identifying individuals at all levels of risk and help focus intervention on those with highest priority and emerging risks, to prevent more serious care episodes. The ultimate goal is to move participants from higher to lower risk categories.

Appropriate, patient-centered care

By stratifying the entire population, the personal health nurse and patient's physician can create a personal health management plan specifically suited to each individual participant that can be viewed and managed via the portal.

Long-term accountability and engagement

Our personal health nurses provide continuous support to lower risk levels, including ongoing management of health conditions, health checks and education to empower individuals to take an active role in their health over the long haul.
